EDUCATION

Bachelor's of Science in Data Science

December 2027

University of North Carolina at Charlotte; Charlotte, NC

TECHNICAL SKILLS

Programming Languages: Python (NumPy, Pandas, SciPy), R, Java, C

Applications: Microsoft Excel, VS Code, Anaconda, Microsoft Powerpoint, Jupyter Notebook, RStudio, MATLAB, SQL, ClaudeAI

COURSE PROJECTS

Independent Regression Analysis Project , Elements of Statistics II

Summer 2026

- Built a regression analysis model using the elevation data from Major League Baseball Parks and their player's slugging percentages to find a correlation between the park's elevation and slugging percentages
- Developed using base RStudio functions (plot(), lm(), abline(), resid())
- Concluded that the elevation of Major League Baseball Parks does in fact impact the slugging percentage of the players, as there was less than a 5% chance that the percentages were random

Data Science Analysis Project, Data and Society A & B

Spring 2026

- Built an Ordinary Least Squares (OLS) model using real data (revenue and tourism) from the city of Charlotte in order to determine if the Bank of America Stadium should be privately or publicly funded
- Developed using Python libraries such as NumPy and Pandas
- Established that public funding would not increase revenue and tourism in Charlotte, therefore advocating for the stadium to be privately funded
